Diving Into the Blue Holes of the Bahamas

KODAKOLOR (UPPER) BY GEORGE J. BENJAMIN, LKACHUIMI (RIGHT) AND KIMU KUMI BY BATES LITTECHALES (C) N.G.S.

To the cellars of the sea

THEIR BOAT double-anchored against currents from a hole off Rat Cay (above), the team dives during calm periods when the flow changes direction.

A spelunker on land before entering his first blue hole, the author (lowering lights, left) has spent more than a decade exploring these underwater labyrinths.

Diving with scuba gear (right), he rigs a line to guide explorers returning from passages clouded by silt. His son George Jr. handles lights powered by separate systems in case one fails. On the boat, diver Archie Forfar prepares to follow, as a partly submerged camera captures both realms.

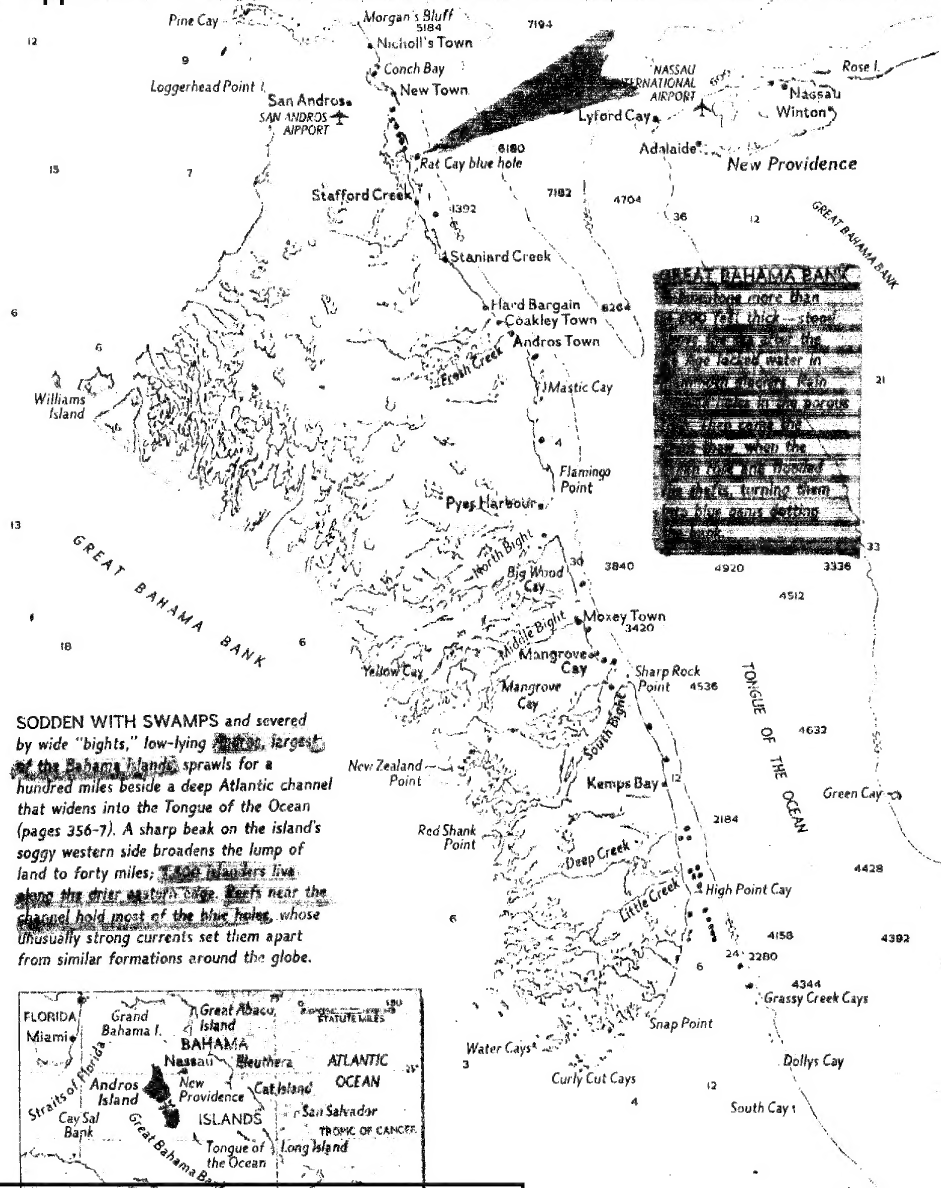

CPYRGHT

Like a closed gate, a rockfall 150 feet into a side tunnel at the bottom of a 200 foot deep blue hole blocks exploration by diver Heinz Bolliger. "We believe this cave might go on for miles," says the author.

CPYRGHT

SODDEN WITH SWAMPS and covered by wide "bights," low-lying ~~Andros~~, largest of the Bahama Islands, sprawls for a hundred miles beside a deep Atlantic channel that widens into the Tongue of the Ocean (pages 356-7). A sharp beak on the island's soggy western side broadens the lump of land to forty miles; ~~1,500~~ ~~inhabitants~~ live along the drier eastern edge. Near the channel hold most of the blue holes, whose unusually strong currents set them apart from similar formations around the globe.

Andros Island
